Cervical Cancer Awareness Month

In the US, 13,000 women were diagnosed and 4,000 deaths occurred due to cervical cancer in 2017.

It affects women of all ages worldwide and presents no symptoms in the early stages.

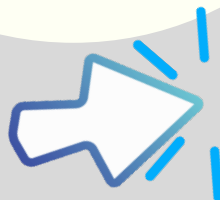

• Get regular health screenings

Did You Know?

Cervical cancer remains the third most common cancer among women worldwide—and the 14th most common in the U.S.

Cervical cancer screenings are successful in detecting the human papillomavirus (HPV), as well as predicting a woman's risk of cervical cancer.

CDC's National Breast and Cervical Cancer Early Detection Program provides low-cost breast and cervical cancer screenings
